BMC AMI Application Restart Control Learning Path

BMC AMI Application Restart Control for Db2® Learning Track : Application Developers and System Administrators

Recommended for: Application Developers and System Administrators

Product version: 4.2

WBT
Web-based Training

CERT
Certification

ILT
Instructor-led
Classroom/Online

ASP
Assisted Self Paced

BMC AMI Application Restart Control (AR/CTL) product enables to resume failed or interrupted batch applications from the most recent checkpoint rather than from the beginning of the job. It helps implement checkpoint/restart functionality with no changes to application code or jobs. BMC AMI Application Restart Control selects the right checkpoint every time, eliminating errors and the need to restart your restart. Faster restarts minimize contention between batch jobs and online processing. AR/CTL helps you determine the best balance between performance, restart time, and checkpoint overhead by controlling the checkpoint frequency outside the application.

—— Mandatory Path — — — Optional Path

BMC AMI Application Restart Control 4.x: Fundamentals Concepts for Db2®, IMS™, and VSAM (WBT)
Duration: **2 Hours**

BMC AMI Application Restart Control 4.x: Fundamentals Using ISPF Interface (WBT)
Duration: **1 Hour**

BMC AMI Application Restart Control for Db2® 4.x: Fundamentals Using (WBT)
Duration: **2 Hours**

BMC Certified Associate: AMI Application Restart Control for Db2® Online Exam
Duration: **2 Hours**
